Chapter 3

GSS Variables

The following variables were fielded as part of the ISSP Digital Societies module in the 2024 GSS. Questions used either a 5-point scale or a 7-point scale. These scales were:

- For *frequency*, a standard 5 -point scale was: 1 = Very often, 2 = Often, 3 = Sometimes, 4 = Hardly ever, 5 = Never.
- For *agreement*, a 5-point scale was: 1 = Strongly agree, 2 = Agree, 3 = Neither agree nor disagree, 4 = Disagree, 5 = Strongly disagree.

These scales were all reversed when coding such that larger numbers indicate more frequency. Values outside 1–5 (or, on 7-point scales, 1-7) were set to NA. Analyzed on ordinal scale; lower values indicate higher frequency of behavior.

Digital Studies Variables

INTRNETUSE *— Frequency of internet use over past 12 months*

Question wording: "How often did you use the internet in the past 12 months, whether via computer, tablet, smartphone or any other device?"

Response scale: *1 = Almost all the time, 2 = Several times a day, 3 = Once a day, 4 = Several times a week, 5 = Several times a month, 6 = Less often, 7 = Never.*

INTGAME *— How often R uses the internet for video games*

Question wording: "How often do you use the internet for each of the following activities? Playing online video games."

Response scale: 5-point, frequency.

INTSTREAM *— How often R uses the internet for music/video streaming*

Question wording: "How often do you use the internet for each of the following activities? Listening to music or watching videos or movies (streaming services)."

Response scale: 5-point, frequency.

INTSHARE *— How often R uses the internet for sharing photos/videos*

Question wording: "How often do you use the internet for each of the following activities? Posting or sharing photos or videos."

Response scale: 5-point, frequency.

INTMEET *— Whether R is more comfortable meeting people online*

Question wording: "To what extent do you agree or disagree with the following statement? I feel more comfortable meeting new people online than in person."

Response scale: 5-point, agreement.

INTLNLY *— Whether R would feel lonely without the internet*

Question wording: "To what extent do you agree or disagree with the following statement? I would feel lonely without the internet."

Response scale: 5-point, agreement.

INTRUST *— How much R trusts people they've only met online*

Question wording: "Using a scale from 0 to 10, where 0 is no trust at all and 10 is complete trust, how much do you personally trust people you have only met on the internet?"

Response scale: 0–10 integer scale, where 0 = No trust at all and 10 = Complete trust.

Perceptions of who benefits from digital technology

The ISSP module included four items asking respondents who they perceive as benefiting more from digital technology. Each uses a three-point categorical response format rather than an ordinal scale, and so these items are analyzed as proportions rather than means.

GENDTECH *— Are women or men benefiting more from digital technology?*

Question wording: "Overall, who do you think benefits more from using digital technology? Women or men?"

Response categories: 1 = Women are benefiting more than men, 2 = Women and men are benefiting equally, 3 = Men are benefiting more than women.

AGETECH *— Are older or younger people benefiting more from digital technology?*

Question wording: "Overall, who do you think benefits more from using digital technology? Older people or younger people?"

Response categories: 1 = Older people are benefiting more, 2 = Older and younger people are benefiting equally, 3 = Younger people are benefiting more.

CLASSTECH *— Are poor or rich people benefiting more from digital technology?*

Question wording: "Overall, who do you think benefits more from using digital technology? Poor people or rich people?"

Response categories: 1 = Rich people are benefiting more, 2 = Rich and poor are benefiting equally, 3 = Poor people are benefiting more.

EDUCTECH *— Are educated or less-educated people benefiting more from digital technology?*

Question wording: "Overall, who do you think benefits more from using digital technology? The highly educated or the less well educated?"

Response categories: 1 = The highly educated are benefiting more, 2 = Both are benefiting equally, 3 = The less well educated are benefiting more.

Politics and Civic Engagement

POLINT *— How interested R is in politics*

Question wording: "How interested would you say you personally are in politics?"

Response scale: 1 = Very interested, 2 = Fairly interested, 3 = Somewhat interested, 4 = Not very interested, 5 = Not at all interested.

LEFTRGHT1 *— Self-placement on left–right political scale*

Question wording: "In politics people sometimes talk of 'left' and 'right.' Where would you place yourself on this scale, where 0 means the left and 10 means the right?"

Response scale: 0–10 integer scale, where 0 = Left and 10 = Right. Note that this is distinct from the GSS's traditional POLVIEWS variable (used in the trend analysis), which uses a 1–7 liberal–conservative scale.

INTNEWS *— How often R accesses non-routine political news sources online*

Question wording: "How often do you access news sources on the internet that are different from the news sources you would usually use?"

Response scale: 5-point, frequency.

INTVIEWS *— How often R talks about politics online*

Question wording: "How often do you express your political opinions on the internet? For example, in social media, in discussion forums, in blogs or on news websites."

Response scale: 1 = Every day or almost every day, 2 = Several times a week, 3 = Several times a month, 4 = Several times a year, 5 = Less often, 6 = Never.

Trend Analysis Variables

The following variables are core questions that GSS has asked consistently over the past 50 years. Because we are tracking proportions over time, each variable is recoded

into a binary indicator. This produces straightforward trend lines and allows for logistic regressions to be done for divergence tests.

POLVIEWS *— Political ideology on a liberal–conservative scale*

Question wording: "I'm going to show you a seven-point scale on which the political views that people might hold are arranged from extremely liberal—point 1—to extremely conservative—point 7. Where would you place yourself on this scale?"

Original scale: 1 = Extremely liberal, 2 = Liberal, 3 = Slightly liberal, 4 = Moderate/Middle of the road, 5 = Slightly conservative, 6 = Conservative, 7 = Extremely conservative.

Recoding: Two binary indicators. Conservative = 1 if POLVIEWS is 5, 6, or 7, and 0 if 1–4. Liberal = 1 if POLVIEWS is 1, 2, or 3, and 0 if 4–7. Values of 8 (Don't Know) and 9 (No Answer) were set to NA. The moderate category (4) is counted as neither conservative nor liberal in both indicators.

PARTYID *— Party identification*

Question wording: "Generally speaking, do you usually think of yourself as a Republican, Democrat, Independent, or what?"

Original scale: 0 = Strong Democrat, 1 = Not very strong Democrat, 2 = Independent close to Democrat, 3 = Independent (neither, no response), 4 = Independent close to Republican, 5 = Not very strong Republican, 6 = Strong Republican, 7 = Other party.

Recoding: Two binary indicators. Republican-leaning = 1 if PARTYID is 4, 5, or 6, and 0 if 0–3. Pure Independent = 1 if PARTYID is exactly 3 (Independent, neither), and 0 if 0–2 or 4–6. Value 7 was set to NA.

TRUST *— Generalized social trust*

Question wording: "Generally speaking, would you say that most people can be trusted or that you can't be too careful in dealing with people?"

Original categories: 1 = Can trust, 2 = Can't be too careful, 3 = Depends (volunteered).

Recoding: 1 if TRUST = 1, and 0 if TRUST is 2 or 3. All other values set to NA. *Note that NORC has documented that this variable shows sensitivity to mode of administration. The 2021 wave (web-only) and 2022–2024 waves (mixed-mode) may show slightly different results than earlier face-to-face waves due to this discrepancy.*

HAPPY *— General happiness*

Question wording: "Taken all together, how would you say things are these days—would you say that you are very happy, pretty happy, or not too happy?"

Original categories: 1 = Very happy, 2 = Pretty happy, 3 = Not too happy.

Recoding: Two binary indicators. Unhappy = 1 if HAPPY = 3 (Not too happy), and 0 if 1 or 2. Very happy = 1 if HAPPY = 1, and 0 if 2 or 3.

FEFAM *— Attitudes toward traditional gender roles*

Question wording: "It is much better for everyone involved if the man is the achiever outside the home and the woman takes care of the home and family." (Do you strongly agree, agree, disagree, or strongly disagree?)

Original scale: 1 = Strongly agree, 2 = Agree, 3 = Disagree, 4 = Strongly disagree.

Recoding: Gender egalitarian = 1 if FEFAM is 3 or 4 (disagree or strongly disagree with the traditional-roles statement), and 0 if 1 or 2.

ATTEND *— Frequency of religious service attendance*

Question wording: "How often do you attend religious services?"

Original scale: 0 = Never, 1 = Less than once a year, 2 = About once or twice a year, 3 = Several times a year, 4 = About once a month, 5 = Two or three times a month, 6 = Nearly every week, 7 = Every week, 8 = More than once a week.

Recoding: Two binary indicators. Never attend = 1 if ATTEND = 0, and 0 otherwise. Attend at least weekly = 1 if ATTEND is 6, 7, or 8 (nearly every week or more), and 0 otherwise.

Confidence in institutions

Question wording: “I am going to name some institutions in this country. As far as the people running these institutions are concerned, would you say you have a great deal of confidence, only some confidence, or hardly any confidence at all in them?”

CONSCI: Scientific Community

CONPRESS: Press

Response scale: 1 = A great deal, 2 = Only some, 3 = Hardly any.

YMRI Variables

The following variables were fielded as part of the Young Men's Radicalization Index (YMRI), a YouGov opt-in panel survey of 18–29 year old men conducted in 2025. Unless otherwise noted, attitude and belief items used the following standard 5-point scale:

For agreement, a 5-point scale was: 1 = Strongly agree, 2 = Somewhat agree, 3 = Somewhat disagree, 4 = Strongly disagree, 5 = Not sure.

All agreement items were recoded so that higher values indicate stronger agreement (5 = Strongly agree). Reverse-coded items (where agreement indicates a more egalitarian or progressive view) were recoded so that 5 = Strongly disagree with the item as written. Values of 'Not sure' (original code 5) were recoded to the midpoint (3). Values outside the valid range were set to NA.

Creator Trust Variables

Respondents were shown a list of online creators and public figures associated with manosphere or anti-feminist content and asked to rate their relationship with each. The 11 creators included in this analysis (trust_grid indices 1, 2, 3, 4, 5, 10, 11, 16, 18, 19, 24) were selected based on their public endorsement of Donald Trump and association with manosphere content.

***trust_grid_x* —** *Relationship with each creator (1 = Trust, 2 = Like but skeptical, 3 = Don't like, 4 = Not familiar)*

Question wording: “Next, you will see the names of some people. Some have strong opinions about these people, while many others don’t really know who they are. For each of those, please say whether you tend to like that person’s content and generally trust what they say, like that person’s content but are generally skeptical of what they say, if you don’t like that person’s content, or if you aren’t really familiar with that person.”

Response scale: 1 = Like this person and generally trust their views, 2 = Like this person but generally don't trust their views, 3 = Don't like this person's content, 4 = Not really familiar with this person. Code 9 (not asked, respondent did not recognize the person) was set to NA on import.

n_trusted **—** *Number of manosphere creators trusted (count, 0–11)*

Derived from *trust_grid_x*.

Response scale: Count of creators where trust_grid_x = 1 across all 11 creator indices. Range: 0–11.

is_truster_binary **—** *Trusts at least one creator (binary)*

Derived from *n_trusted*.

Response scale: 1 = Truster (n_trusted > 0), 0 = Non-Truster (n_trusted = 0). Stored as a factor with Non-Truster as the reference level.

fan_status **—** *Fan hierarchy level (ordered, 3 categories)*

Derived from *trust_grid_x*.

Response scale: True Believer = trusts at least one creator (trust_grid = 1). Skeptical Fan = follows/likes at least one but trusts none (trust_grid = 2). Non-Fan = neither trusts nor follows any creator. Ordered factor: Non-Fan < Skeptical Fan < True Believer.

Sexism Battery

Eleven items measuring attitudes toward gender roles, masculinity, and feminism. All items recoded so that 5 = most sexist/anti-feminist. Items 4 and 7 are reverse-coded (agreement with those items indicates a more egalitarian view). The sexism_index is the row mean across all 9 retained items.

Question wording: For each of the following statements, please say whether you generally [agree or disagree] with that statement.

sexism_battery_1 — *Men can't speak their minds*

Question wording: "Guys can have their reputation destroyed just for speaking their minds these days."

Response scale: 5-point agreement scale, standard coding.

sexism_battery_2 — *Society looks down on masculine men*

Question wording: "These days, society looks down on men who are more masculine"

Response scale: 5-point agreement scale, standard coding

sexism_battery_3 — *Belief in gender roles*

Question wording: "Things are generally better when men bring in money and women take care of the home and kids"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_4 — *Belief in reversed gender roles*

Question wording: "Things would be better if women held more powerful positions in society and men did more around the house"

Response scale: 5-point agreement scale, reverse-coded (5 = Strongly disagree — i.e., disagrees that feminism has gone too far).

sexism_battery_5 — *Feminism favors women*

Question wording: "Feminism is about favoring women over men"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_6 — *Men need to be valued more*

Question wording: "Men should be represented and valued more in our society"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_7 — *Media bias towards men*

Question wording: "It is evident that the media is biased towards men"

Response scale: 5-point agreement scale, reverse-coded (5 = Strongly disagree).

sexism_battery_8 — *There are roles for men*

Question wording: "There are certain roles only men can do"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_9 — *There are roles for women*

Question wording: "There are certain roles only women can do"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_10 — *Gay men aren't men*

Question wording: "Gay men aren't really men"

Response scale: 5-point agreement scale, standard coding.

sexism_battery_11 — *Trans men aren't men*

Question wording: "Trans men aren't really men"

Response scale: 5-point agreement scale, standard coding.

sexism_index — *Mean sexism score (composite, 1–5)*

Derived from *sexism_battery_x*.

Response scale: Row mean of s1–s11, excluding 4 and 7, which were found to be outliers. Range: 1–5. Higher values indicate more sexist attitudes. Factor Analysis in Tables B1 and B2.

Racial Grievance Battery

Three items measuring racial attitudes and grievance. r1 is reverse-coded (agreement = more egalitarian). r2 and r3 are standard-coded (agreement = higher racial grievance).

Question wording: "Please indicate the extent to which you agree with each of the following statements."

racism_battery_1 — *Awareness of white privilege (reverse-coded)*

Question wording: "White people in the U.S. have certain advantages because of the color of their skin"

Response scale: 5-point agreement scale, reverse-coded (5 = Strongly disagree — acknowledges white privilege).

racism_battery_2 — *Racism is rare*

Question wording: "Racial problems in the U.S. are rare, isolated situations"

Response scale: 5-point agreement scale, standard coding.

racism_battery_3 — *Society provokes reverse racism / special treatment grievance*

Question wording: "There is racism out there, but society these days provokes these kind of views by making everything about race and deciding some people deserve special treatment based on their race"

Response scale: 5-point agreement scale, standard coding.

Voting Outcome Variables

presvote24post — *2024 President Vote Post Election*

Question wording: *"*Who did you vote for in the election for President in 2024?"

Response scale: 1 = Kamala Harris, 2 = Donald Trump, 3= Robert F. Kennedy, Jr., 4 = Jill Stein, 5 = Cornel West, 6 = Chase Oliver, 8 = Other, 9 = Did not vote for President.

vote_trump_24 — *Voted for Trump in 2024 (binary)*

Derived from presvote24post

Response scale: 1 = answered 2 in presvote24post, 0 = all others. Restricted to eligible respondents (birthyr ≤ 2006) who reported turning out in 2024. Respondents who did not vote or were ineligible are set to NA.

presvote20post — *2020 President Vote Post Election*

Question wording: *"*Who did you vote for in the election for President in 2020?"

Response scale: 1 = Joe Biden, 2 = Donald Trump, 3= Jo Jorgensen, Jr., 4 = Howie Hawkins, 6 = Did not vote for President.

vote_trump_new_24 — *New or switched Trump voter in 2024 (binary)*

Derived from *vote_trump_24* and *presvote20post*

Response scale: Among 2024 Trump voters: 1 = didn't answer 2 in presvote20post and did answer 1 in presvote24post , 0 = answered 2 in presvote20post and presvote24post, or other answers in 2 in both. Non-Trump 2024 voters coded 0. Ineligible/non-voters set to NA. Primary mobilization outcome variable.

Dating and Loneliness Variables

loneliness — *General loneliness (life_goals_14)*

Question wording: "I often feel lonely."

Response scale: 5-point agreement scale, standard coding.

types_of_relationships — *Relationship history*

Question wording: “When it comes to serious relationships, would you say...”

Response scale: 1 = I have never really been in a serious relationship, 2 = I have been in a serious relationship in the past, but am not currently, 3 = I have a "situationship" or "friends with benefits," but I don’t consider it a relationship, 4 = I am currently in a serious relationship

never_relationship — *Never been in a serious relationship (binary)*

Derived from types_of_relationships

Response scale: 1 = 1 in types_of_relationships, 0 = selected any other response category.

breakup — *when a breakup last occurred (categorical)*

Question wording: “When did your most recent relationship breakup occur?”

Response scale: 1 = I have never gone through a breakup, 2 = Within the past 6 months, 3 = Within the past 6-12 months, 4 = More than 12 months ago, and I have been in at least one relationship since, 5 = More than 12 months ago, and I have not been in a relationship since, 6 = Not sure

recent_breakup — *Recent breakup within past 12 months (binary)*

Derived from breakup

Response scale: 1 = answered breakup as 2 or 3. 0 = all other responses. Respondents who have never been in a relationship are coded 0.

active_relationship *— Currently in a serious relationship (binary)*

Question wording: "Which of the following best describes your relationship history? I am currently in a serious relationship."

Response scale: 1 = selected this response, 0 = selected any other response category.

Social Media Variables

socialmediause_ymri_x *— Social Media Use*

socialmediause_ymri_1 *4chan*

socialmediause_ymri_2 *Discord*

socialmediause_ymri_3 *Facebook*

socialmediause_ymri_4 *Gab*

socialmediause_ymri_5 *Instagram*

socialmediause_ymri_6 *LinkedIn*

socialmediause_ymri_7 *Nextdoor*

socialmediause_ymri_8 *Parler*

socialmediause_ymri_9 *Pinterest*

socialmediause_ymri_10 *Reddit*

socialmediause_ymri_11 *Rumble*

socialmediause_ymri_12 *Signal*

socialmediause_ymri_13 *Snapchat*

socialmediause_ymri_14 *Telegram*

socialmediause_ymri_15 *Threads*

socialmediause_ymri_16 *TikTok*

socialmediause_ymri_17 *Tumblr*

socialmediause_ymri_18 *Twitch*

socialmediause_ymri_19 *X, formerly known as Twitter*

socialmediause_ymri_20 *WhatsApp*

socialmediause_ymri_21 *YouTube*

socialmediause_ymri_22 *Bluesky*

socialmediause_ymri_23 *None of the above*

Question wording: Which of the following apps or platforms have you used in the past week? Please select all that apply.

Response scale: Binary, 1 = yes, 2 = no.

n_platforms_used **—** *Number of platforms used in past week (count)*

Derived from *socialmediause_ymri_x*

Response scale: Count of platforms selected from socialmediause_ymri_x

alt_platform_user **—** *Used alt-right/manosphere platform in past week (binary)*

Question wording: "Derived variable."

Response scale: 1 = used any of: 4chan, Gab, Parler, Rumble, or Telegram in the past week. 0 = used none of these.

right_platform_user **—** *Used right-coded platform in past week (binary)*

Question wording: "Derived variable."

Response scale: 1 = used X/Twitter or any alt-right platform (alt_platform_user = 1). 0 = used none of these.

platform_use_x **—** *Platform Use*

platform_use_4chan *4chan*

platform_use_discord *Discord*

platform_use_facebook *Facebook*

platform_use_gab *Gab*

platform_use_insta *Instagram*

platform_use_linkedin *LinkedIn*

platform_use_nextdoor *Nextdoor*

platform_use_parler *Parler*

platform_use_pinterest *Pinterest*

platform_use_reddit *Reddit*

platform_use_rumble *Rumble*

platform_use_signal *Signal*

platform_use_snapchat *Snapchat*

platform_use_telegram *Telegram*

platform_use_threads *Threads*

platform_use_tiktok *TikTok*

platform_use_tumblr *Tumblr*

platform_use_twitch *Twitch*

platform_use_x *X, formerly known as Twitter*

platform_use_whatsapp *WhatsApp*

platform_use_youtube *YouTube*

platform_use_bluesky *Bluesky*

Question wording: And for each of those platforms, about how often would you say you use them per day?

Response scale: 1 = Less than 1 hour in total, 2 = 2-3 hours total, 3 = 3-4 hours total, 4 = More than 4 hours per day, 5 = I don't use this.

***total_social_hrs* —** *Total social media hours across all measured platforms (sum)*

Derived from platform_use_x

Response scale: Sum of all variables platform_use_x

Control Variables

***faminc5* —** *Family income (quintile, 1–5)*

Question wording: "Thinking back over the last year, what was your family's annual income?"

Response scale: 1 = Less Than $30,000, 2 = $30,000-$59,999, 3 = $60,000-$99,999, 4 = $100,000-$149,999, 5 = $150,000+, 6 = Prefer not to say. Used as control variable in multivariate models.

educ4 *— Education level (4 categories)*

Question wording: "What is the highest level of education you have completed?"

Response scale: 1 = High school or less, 2 = Some college, 3 = College grad, 4 = Postgrad. Used as control variable in multivariate models.

race2 *— Race (binary)*

Question wording: "What racial or ethnic group best describes you?"

Response scale: 1 = White (non-Hispanic), 2 = Non-white. Used as control variable in multivariate models.

pid7 *— Party identification*

Question wording: *Generally speaking, do you think of yourself as a ...?*

Response scale: 1 = Strong Democrat, 2 = Not very strong Democrat, 3 = Lean Democrat, 4 = Independent, 5 = Lean Republican, 6 = Not very strong Republican, 7 = Strong Republican, 8 = Something else, 9 = Not sure. Used as control variable in multivariate models.

pid7_with_leaners *— Party identification including leaners (3 categories)*

Derived from pid7.

Response scale: 1 = answered 1 2 or 3 on pid7, 2 = answered 5 6 or 7 on pid7, 3 = 4 on pid7.

urbancity *— Urban/rural classification*

Question wording: "How would you describe the place where you live?"

Response scale: 1 = City, 2 = Suburb, 3 = Town, 4 = Rural area, 5 = other.

urbancity3 *— Urban/rural classification (3 categories)*

Derived from urbancity.

Response scale: 1 = 1 in urbancity, 2 = 2 or 3 in urbancity, 3 = 4 or 5 in urbancity. Used as control variable in multivariate models.

birthyr *— Birth Year*

Question wording: "In what year were you born?"

Response scale: numeric

age4 *— Age group within 18–29 sample (4 categories)*

Derived from birthyr.

Response scale: birthyr – 2025. 1 = 18–20, 2 = 21–23, 3 = 24–26, 4 = 27–29. Used as control variable in multivariate models.

GSS Tables

A. Cross-Sectional Results (GSS 2024, ISSP Digital Societies Module)

Table A1. Weighted Group Means: Digital Life Variables (1–5 Scales)

Scales reversed so that higher values = more frequent / stronger agreement.

Variable	Young Men (18–29)	Young Women (18–29)	Older Men (30+)	Older Women (30+)	General Population
INTGAME – Online gaming frequency	3.84	2.74	2.31	2.07	2.40
INTSTREAM – Streaming frequency	4.48	4.34	3.45	3.35	3.59
INTSHARE – Photo/video sharing	3.25	3.86	2.83	3.11	3.09
INTMEET – Comfortable meeting online	2.67	2.53	2.30	2.14	2.29
INTLNLY – Lonely without internet	2.77	2.91	2.36	2.41	2.48
INTNEWS – Online news consumption	3.21	3.02	3.07	2.79	2.96

Note: All items on 1–5 scale (1 = never/strongly disagree, 5 = very often/strongly agree). Source: GSS 2024, ISSP Digital Societies module. Weight: WTSSNRPS.

Table A2. Weighted Group Means: Non-Standard Scale Variables

Variable	Scale	Young Men (18–29)	Young Women (18–29)	Older Men (30+)	Older Women (30+)	Gen. Pop.
INTRUST – Trust online strangers	0–10	3.60	2.86	2.55	2.31	2.58
INTRNETUSE – Internet frequency	1–7	6.37	6.62	6.03	5.99	6.10
POLINT – Political interest	1–5	2.69	2.63	3.25	2.88	2.97
LEFTRGHT1 – Left-right placement	0–10	5.25	5.50	5.82	5.66	5.68
INTVIEWS – Discuss politics online	1–6	1.92	2.12	2.03	1.76	1.91

Note: INTRUST: higher = more trust. INTRNETUSE: higher = more frequent (reversed). POLINT: higher = more interested (reversed). LEFTRGHT1: 0 = left, 10 = right (not reversed). INTVIEWS: higher = more

frequent (reversed). Weight: WTSSNRPS.

Table A3. Weighted Proportions: Perceptions of Who Benefits from Digital Technology

Variable	Response	Young Men (18–29)	Young Women (18–29)	Older Men (30+)	Older Women (30+)
GENDTECH	Women benefit more	16.1%	22.0%	12.3%	7.4%
	Equal	62.0%	42.5%	75.5%	72.1%
	Men benefit more	21.9%	35.4%	12.3%	20.6%
AGETECH	Older benefit more	13.6%	11.5%	5.5%	3.8%
	Equal	24.2%	29.2%	21.8%	20.6%
	Younger benefit more	62.1%	59.4%	72.7%	75.6%
CLASSTECH	Rich benefit more	63.6%	74.5%	68.9%	62.0%
	Equal	32.6%	18.9%	28.0%	32.6%
	Poor benefit more	3.8%	6.5%	3.1%	5.4%
EDUCTECH	Educated benefit more	54.2%	55.0%	61.1%	59.8%
	Equal	40.1%	32.0%	32.0%	29.8%
	Less educated benefit more	5.7%	12.9%	6.9%	10.4%

Note: Weighted proportions. Rows within each variable sum to 100%. Source: GSS 2024, ISSP Digital Societies module. Weight: WTSSNRPS.

Table A4. Logistic Regression Predicting Young Male (18–29) Group Membership

Dependent variable: 1 = Young Male (18–29), 0 = all others. Quasibinomial family.

Predictor	OR	SE	z	p	95% CI	
INTGAME – Online gaming	1.90	0.133	4.84	< .001	1.47–2.47	*
INTSTREAM – Streaming	1.90	0.248	2.60	.010	1.17–3.09	*
INTRUST – Online trust	1.16	0.080	1.87	.062	0.99–1.36

*Note: Each row is a separate survey-weighted OLS regression. β = unstandardized coefficient for the Young Male (18–29) indicator, controlling for sex (Male) and age (continuous). Positive β = young men score higher than predicted by age and sex alone. * p < .05. Weight: WTSSNRPS.*

B. Trend Analysis Results (GSS 1972–2024 Cumulative File)

Table A6. Divergence Tests: Year × Young Male Interaction Coefficients (1990–2024)

Model: Attitude ~ Year + YoungMale + Year×YoungMale + Male + Age. Year centered at 2000, scaled per decade.

Attitude	β (per decade)	SE	p		Interpretation
% Reject trad. gender roles (FEFAM)	–0.342	0.058	< .001	*	Young men declining
% Republican-leaning (PARTYID 4–6)	–0.156	0.047	.001	*	Young men declining
% 'Not too happy' (HAPPY)	+0.152	0.063	.016	*	Young men increasing
% Great deal confidence: Science	+0.080	0.052	.129		No sig. divergence
% Hardly any confidence: Press	+0.056	0.052	.278		No sig. divergence
% Never attend services	+0.043	0.047	.360		No sig. divergence
% Liberal (POLVIEWS 1–3)	–0.029	0.044	.502		No sig. divergence
% 'Very happy'	+0.029	0.044	.515		No sig. divergence
% Pure Independent (PARTYID 3)	+0.020	0.051	.697		No sig. divergence
% Conservative (POLVIEWS 5–7)	–0.016	0.050	.751		No sig. divergence
% 'Most people can be trusted'	+0.019	0.074	.803		No sig. divergence

*Note: Survey-weighted quasibinomial logistic regression, 1990–2024. β = Year × Young Male interaction coefficient in log-odds per decade. Positive = young men trending higher on that measure over time relative to the population. * p < .05. Weight: WTSSPS.*

Table A7. Sample Sizes

2024 GSS Cross-Section

Group	Full GSS (N)	ISSP Module (N)	% of Sample
Young Men (18–29)	222	~105–111	6.7%
Young Women (18–29)	231	~105–111	7.0%
Older Men (30+)	1,245	~1,157	37.6%
Older Women (30+)	1,592	~1,412	48.1%

Total	3,309	~2,956	100%

Note: ISSP module N is approximate; varies by variable (74–111 young men depending on item). Full GSS includes 19 cases with missing age/sex.

Young Men (18–29): Per-Variable Valid N in ISSP Module

Variable	Valid N	Variable	Valid N
INTRNETUSE	111	GENDTECH	91
INTGAME	106	AGETECH	95
INTSTREAM	106	CLASSTECH	91
INTSHARE	106	EDUCTECH	94
INTMEET	105	POLINT	105
INTLNLY	105	LEFTRGHT1	74
INTRUST	105	INTNEWS	104
		INTVIEWS	100

Note: Valid N = non-missing responses within the young men (18–29) cell after recoding reserved codes to NA.

YMRI Tables

All models use YouGov Blue post-stratification weights via survey-weighted regression (svyglm). Controls unless otherwise noted: family income (5-cat), education (4-cat), race (binary), party identification with leaners (3-cat, factored), urbanicity (3-cat, factored), age group (4-cat).

Table B1. Sexism Battery — PCA Factor Loadings (1 Factor)

Item	Loading	Communality	Uniqueness
s1: Guys can't speak their minds	0.611	0.374	0.626

Rural	1.12	0.29, 4.36		0.9
Age Group	0.92	0.61, 1.39		0.7

*Note: DV: Voted Trump in 2024. Three count predictors entered simultaneously. * p < .05.*

Table B17. Creator Ladder — Categorical Groups on Trump Vote

Characteristic	OR	95% CI		p-value
Engagement Level (Ref: No Recognition)				
0_None				
1_Recognizes	592,772	114,354, 3,072,728	*	<0.001
2_Follows	597,051	90,806, 3,925,615	*	<0.001
3_Trusts	1,775,280	365,237, 8,628,971	*	<0.001
Family Income (Quintile)	1.07	0.84, 1.35		0.6
Education (4-Level)	1.09	0.75, 1.58		0.7
Race (Binary)	0.67	0.36, 1.27		0.2
Party ID (3-cat)				
Democrat				
Republican	77.2	30.2, 197	*	<0.001
Independent	5.82	2.76, 12.2	*	<0.001

Urban/Rural (3-cat)				
Urban				
Suburban	0.43	0.22, 0.85	*	0.015
Rural	1.11	0.27, 4.55		0.9
Age Group	0.94	0.63, 1.41		0.8

*Note: DV: Voted Trump in 2024. NOTE: Extreme ORs reflect quasi-complete separation. Interpret with caution. * p < .05.*

Table B18. Weighted Mean Sexism Index by Race

Race	Mean Sexism Index	SE
White	3.187	0.038
Black	3.386	0.065
Hispanic	3.223	0.074
Other/Multiracial	3.074	0.098

*Note: Weighted means from svymean. Weight: YouGov Blue. * p < .05.*

Table B19. Weighted OLS — Sexism Index by Race (Ref: White)

Characteristic	Beta	95% CI		p-value
Race/Ethnicity				
White				
Black	0.31	0.17, 0.45	*	<0.001
Hispanic	0.19	0.04, 0.33	*	0.013
Other/Multiracial	-0.09	-0.27, 0.09		0.3
faminc5	0.01	-0.02, 0.05		0.4
educ4	0.00	-0.06, 0.06		>0.9
pid7_with_leaners				
Democrat				
Republican	0.77	0.64, 0.90	*	<0.001
Independent	0.34	0.22, 0.47	*	<0.001
urbancity3				
Urban				
Suburban	-0.12	-0.24, -0.01	*	0.028
Rural	-0.04	-0.21, 0.12		0.6
age4	0.04	-0.01, 0.10		0.11

*Note: DV: Sexism Index (1–5). Controls: income, education, party ID, urbanicity, age. * p < .05.*

Table B20. Trust Level Distribution by Race (Unweighted %)

Race	Trust 0	Trust 1	Trust 2	Trust 3+
White	40.4	15.2	10.5	33.9
Black	33	19.4	9.4	38.2
Hispanic	47.5	17.5	9.4	25.6
Other/Multiracial	51.4	15.3	9	24.3

*Note: Row percentages of each racial group at each trust level. * $p < .05$. Weight: WTSSPS.*

Chapter 5

Table D1. Streamers by Average Toxicity Score Across Categories

Streamer	Toxicity	Insult	Profanity	Identity Attack	Threat	Severe Toxicity
clavicular	0.2558	0.1136	0.1251	0.0424	0.0164	0.0162
hstikkytokky	0.2157	0.0804	0.1015	0.0163	0.0099	0.0124
n3on	0.1718	0.075	0.0841	0.016	0.007	0.0075
asmongold	0.16	0.0767	0.0669	0.0214	0.0134	0.0048
AdinRoss	0.1416	0.0591	0.0659	0.021	0.006	0.0057
Jynxzi (Twitch)	0.0996	0.0464	0.0461	0.0031	0.004	0.0033

Table D2. New Users after 25% of the Overall Time

Streamer	New Users	Excluded Existing	First Msg Toxicity	Overall Toxicity	Delta
clavicular	10,454	12,276	0.2047	0.2176	-0.0129
hstikkytokky	1,230	1,595	0.1647	0.1814	-0.0167
n3on	4,332	8,175	0.1450	0.1469	-0.0019
asmongold	2,572	6,120	0.1488	0.1564	-0.0076
AdinRoss	4,661	6,104	0.1466	0.1598	-0.0132

Table D3. New Users after 50% of the Overall Time

Streamer	New Users	Excluded Existing	First Msg Toxicity	Overall Toxicity	Delta
clavicular	5,305	17,425	0.2127	0.2218	-0.0091
hstikkytokky	745	2,080	0.1703	0.1786	-0.0083

n3on	1,976	10,531	0.1499	0.1495	+0.0005
asmongold	1,314	7,378	0.1533	0.1580	-0.0046
AdinRoss	1,954	8,811	0.1106	0.1238	-0.0132

Table D4. Each Streamer's Most Toxic Moments

Streamer	Most Toxic Day	Most Toxic Time (EST)	Peak Hourly Average	Highest Recorded Burst
clavicular	Tuesday	3:00 AM	30.94%	91.74%
hstikkytokky	Sunday	5:00 PM	28.59%	88.73%
n3on	Thursday	7:00 AM	24.20%	79.88%
asmongold	Thursday	2:00 PM	17.19%	65.12%
AdinRoss	Sunday	10:00 AM	19.94%	58.12%

Code Availability

The code for each chapter, including RStudio code for Chapter 3 and Python code for Chapters 4 and 5, is available on GitHub.[1] Tools from Visual Studio Code and Anthropic were used to help generate and format code.
